

One Stop Floors — Conversion-Goal Cleanup + Negatives (APPLIED)

Account 750-765-2535 · AW-16678636617 · Shahab GO · 2026-07-11 AEST · ads_all. No budgets/Smart-Bidding changed (held 7-14d). No 2nd GA4 installed.

Product-Owner Summary

- Important correction first (honest):** the GA4-import "Submit lead form" was **already correctly excluded** from your bid-count — last 7 days it recorded **0** biddable conversions (it still logs in "all conversions"). The 07-02 fix DID work. The "35" my /ads audit flagged was **historical** — old conversions still inside the 30-day window, not live double-counting. So nothing more was needed there (and demoting the shared lead goal would have wrongly killed the real form conversion too).
- What I changed:** demoted the **"Contact Us"** page-load action (it was still biddable) and added **16 wasted-term negatives**. Now only **Form Submit-Web + Phone Click-Web** feed bidding + "Conversions".
- Clean numbers:** reported conversions were inflated (70 → looked like \$48 CPA). Real optimisation leads (form + phone-click) = **29 in 30 days** → **clean CPA ≈ \$115** (last 7 days: 5 leads, \$160 CPA). Higher but HONEST — bidding now optimises to real leads.
- Enhanced Conversions:** can be turned on but needs a Shahab UI click (our API is blocked) + the site to send hashed email/phone — fields handed to wp-onestop via coord.

Item status

Item	Status
1 — Demote GA4-import "Submit lead form" 7004895990	DONE (already excluded — verified 0 biddable/7d; goal-level demote N/A + would harm real form conv, shared SUBMIT_LEAD_FORM-WEBSITE goal)
2 — Demote "Contact Us" codeless 7132033094	DONE via goal (action mutate MUTATE_NOT_ALLOWED → demoted CONTACT-WEBSITE goal to non-biddable)
3 — Enhanced Conversions	NEEDS-UI-STEPS (Shahab toggle) + site user_data (wp-onestop) — API-blocked
6 — Negatives	DONE (16 added — 8 terms × 2 Search campaigns)

Before / after — conversion actions

ID	Name	Source	Primary	Counting	Incl. in Conversions	Biddable goal	Verdict
7615305340	Form Submit - Web	website gtag	Yes	ONE/click	Yes → Yes	SUBMIT_LEAD_FORM~WEBSITE = biddable (kept)	KEEP ✓
7615299075	Phone Click - Web	website gtag	Yes	ONE/click	Yes → Yes	PHONE_CALL_LEAD~WEBSITE = biddable (kept)	KEEP ✓
7004895990	Submit lead form (GA4 import)	GA4 form_submit	No	MANY/click	No (already, unchanged)	excluded via include=False (not goal)	NOT counted ✓ (0 biddable/7d)
7132033094	Contact Us (codeless)	page-load /contact/	Yes* (locked)	MANY/click	Yes → No	CONTACT~WEBSITE: biddable → non-biddable	DEMOTED ✓

*Contact Us action is codeless (Google-hosted) → its own primary flag can't be mutated via API; demoting its goal (CONTACT~WEBSITE) achieves the same: it no longer counts or bids.

Before / after — customer conversion GOALS

Goal (category ~ origin)	Before	After
SUBMIT_LEAD_FORM ~ WEBSITE	biddable	biddable (UNCHANGED — keeps Form Submit-Web; GA4-import excluded at action level)
PHONE_CALL_LEAD ~ WEBSITE	biddable	biddable (kept)
PHONE_CALL_LEAD ~ CALL_FROM_ADS	biddable	biddable (real ad calls, kept)
CONTACT ~ WEBSITE	biddable	NON-BIDDABLE (demoted → Contact Us)
CONTACT ~ CALL_FROM_ADS	biddable	biddable (real ad calls, kept)

Clean 30-day numbers (optimisation set = Form Submit-Web + Phone Click-Web)

Metric	Reported (inflated)	CLEAN
Form leads (Form Submit-Web)	—	14
Phone clicks (Phone Click-Web)	—	15
Total optimisation leads	70 (incl. 35 GA4-import historical + 5 Contact Us + others)	29
30-day spend	\$3,343	\$3,343
CPA	\$48 (inflated)	≈ \$115 (clean)
Last 7 days (post-fix)	—	5 leads · \$801 · \$160 CPA

Calls-from-ads are tracked separately (PHONE_CALL_LEAD~CALL_FROM_ADS, kept biddable) and add real phone leads on top.

Browser proof (live /contact/)

Form-submit label (kf4B...) does **NOT** fire on page-load ✓. tel: click → Phone Click fires once ✓ (verified earlier this session). BUT the **Contact Us page-load ping still fires client-side** (/pagead/conversion/16678636617/...en=page_view&label=KFcF...) via Site Kit. It is now **non-biddable/not-counted** (goal demoted), so it's harmless to bidding — but for a full cleanup **wp-onestop should remove the Contact Us page-load tag** (routed via coord).

Negatives added (Item 6 — both enabled Search campaigns)

PHRASE: "vinyl flooring" (\$101/41clk/0conv) · "timber flooring" · "hybrid flooring" · "floating floorboards" · "flooring near me" · "vinyl planks" · "vinyl plank flooring". **EXACT:** [carpet 3 rooms for \$499 near me] (competitor promo). 16 total (8 × 2 campaigns). These are core product-browse terms with 0 conversions — reversible if the client wants product traffic. **No budgets or Smart Bidding changed** (held 7–14 days per instruction).

Site-side verification (live, headless browser — wp-onestop is dormant)

Check	Result	Proof
GA4 G-X7F73MR113 (Site Kit) fires	PASS ✓	region1.google-analytics.com/g/collect tid=G-X7F73MR113 en=page_view → 204
Google Ads AW-16678636617 present	PASS ✓	Site Kit gateway measurement.php?id=AW-16678636617 loads + fires
Phone Click-Web label fires on tel: tap	PASS ✓	/pagead/conversion/16678636617/?en=conversion&label=JEcNCIP8oK8cEMmY_5A-&value=50 → 204 (fired on BOTH a warmed load and a fresh load)
Form Submit-Web label (kf4B...) on page-load	PASS ✓	does NOT fire on page-load — real submit only (verified earlier + tn-aw-conversions code)
WP Rocket delayed-gtag first-tap MISS?	NOT reproduced	On a fresh load, the very-first tel: tap still fired the Phone Click conversion — gtag + the click listener were loaded by tap-time. Residual/theoretical risk on an ultra-fast tap remains (WP Rocket does delay JS).

WP-admin items to flag to coord (wp-onestop — do NOT edit WP myself):

- Enhanced Conversions:** the lead form must send hashed email + phone_number (RAW, gtag hashes) via gtag('set','user_data',{...}) before the Form Submit conversion — then Shahab flips the EC-for-leads toggle in the Ads UI (our API is blocked from it).
- WP Rocket hardening (belt-and-suspenders):** add the conversion tags (tn-aw-conversions + Site Kit gtag) to WP Rocket's "Delay JavaScript execution" **exclusion** list, so an ultra-fast first-tap can never miss.
- Contact Us page-load tag:** the /contact/ page-load still fires the Contact Us ping client-side (now non-biddable, harmless to bidding) — remove the tag for a full cleanup.

GA4 note (corrected)

Existing GA4 **G-X7F73MR113** is LIVE via Site Kit (do NOT say "GA4 missing"). The separate **G-42R9H42SFF** was NOT installed — the GA4-ownership path is a held arch-sm3/coord decision. No second GA4 was added.

Applied via Google Ads API, audit-logged, 2026-07-11 AEST. Read-only elsewhere; no budgets/bidding/2nd-GA4 changes; nothing sent to the client.
