

Urban Eco Flooring — Google Ads + GA4 Audit & Conversions Report

14-day window: 23 Jun – 06 Jul 2026 (AEST) · Read-only audit, no changes made · Prepared by ads_all, 2026-07-07 AEST
Google Ads: NEW account 169-831-7815 (100% of spend) · OLD 169-383-6143 = DELETED 2026-07-07 (0 spend) · GA4 property: Urbanecoflooring (541260808)

Owner Summary (plain English)

- The new account is the only one spending — it ran \$289 over 14 days on ONE Performance Max campaign; the old account is closed and spent nothing.
- Very few leads. Google Ads counted 3 lead-form conversions, but Google Analytics only recorded 1 real form submit in the same 14 days. The extra 2 are almost certainly Google's estimated (modelled) conversions, not real enquiries.
- Phone leads are not being counted in Ads. Analytics caught 5 phone-number taps (2 from the ads) — Google Ads is not counting these as conversions, so real lead volume is understated in one place and padded in another.
- No dollar value on any conversion (\$0), so we cannot use value-based bidding or measure return on ad spend.
- The good news: the Analytics→Ads link works (the imported "generate_lead" matches Analytics exactly, 1 = 1), and paid visitors are engaged (58% engagement, ~3 min on site).
- Verdict: tracking is only partly trustworthy for spend decisions right now — fix conversion value + phone-call tracking and confirm how many of the "3" are real before increasing budget on this Performance Max campaign.

Part 1 — Google Ads (14 days, NEW account)

\$289.03
Spend

8,978
Impressions

209
Clicks

2.33%
CTR

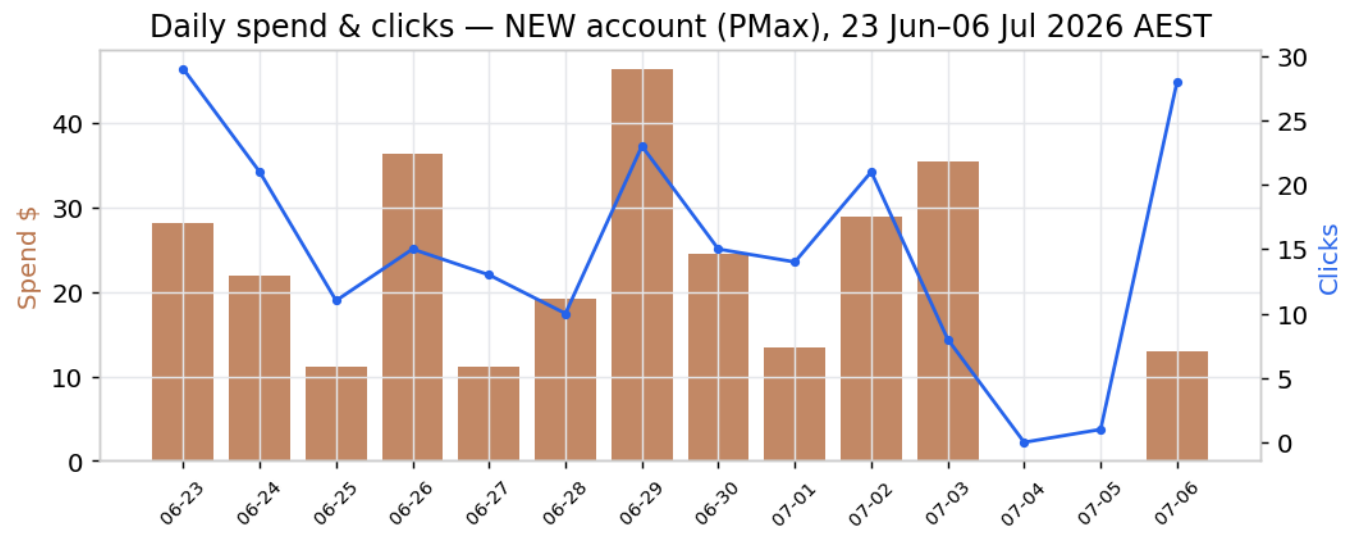

\$1.38
Avg CPC

3
Conversions

\$0
Conv. value

\$96.34
Cost / conv

18.6%
Impr. share

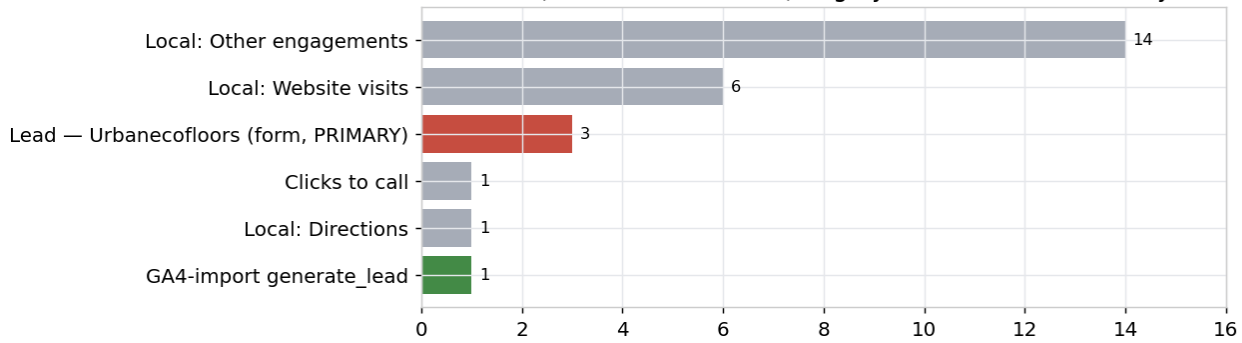

By campaign

Campaign	Type	Status	Spend	Clicks	Conv	Impr share
Urbaneco Pmax Dandenong + South-East Melbourne (NEW)	Performance Max	ENABLED	\$289.03	209	3	18.6%
Performance Max-1	Performance Max	REMOVED	\$0.00	0	0	—

Note: this is a Performance Max campaign, so Google does not expose individual search terms / keywords via the API — search-term-level waste cannot be audited here (a known PMax limitation). Impression share 18.6% = lots of headroom, but PMax needs far more conversions than 3 to optimise well.

Conversion actions

Conversion actions (all-conversions, 14d) — grey = PMax/GBP secondary, non-biddable

Action	Category	Biddable conv	All-conv	Value	Read
Lead — Urbanecofloors	SUBMIT_LEAD_FORM	3	3	\$0	Primary; likely padded by modelling (see Part 3)
Urbanecoflooring (web) generate_lead	SUBMIT_LEAD_FORM	0	1	\$0	GA4 import (secondary) — matches GA4 ✓
Local: Other engagements	ENGAGEMENT	0	14	\$0	GBP/PMax signal, non-biddable ✓
Local: Website visits	PAGE_VIEW	0	6	\$0	non-biddable ✓ (not a lead)
Local: Directions	GET_DIRECTIONS	0	1	\$0	non-biddable ✓
Clicks to call	CONTACT	0	1	\$0	Phone under-counted — GA4 saw 5 phone taps

Device & geo

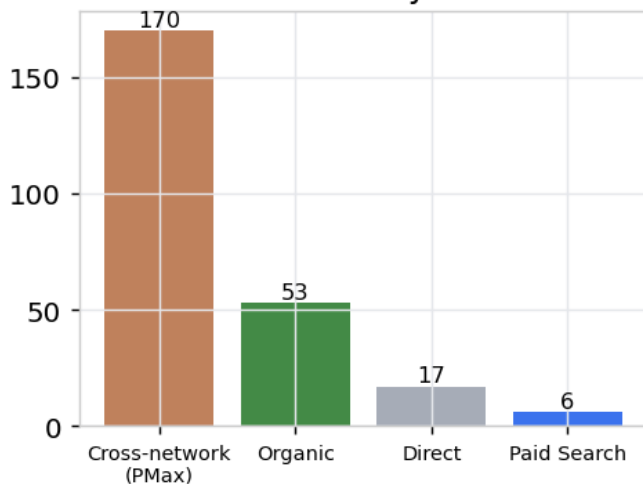

Device	Spend	Clicks	Conv
Mobile	\$188.54	167	2
Desktop	\$96.96	34	1
Tablet	\$3.30	8	0
Connected TV	\$0.23	0	0

Geo: ~79% of spend in Victoria (South-East Melbourne / Dandenong target); a little leakage to other regions. Mobile takes 65% of spend at a much lower CPC.

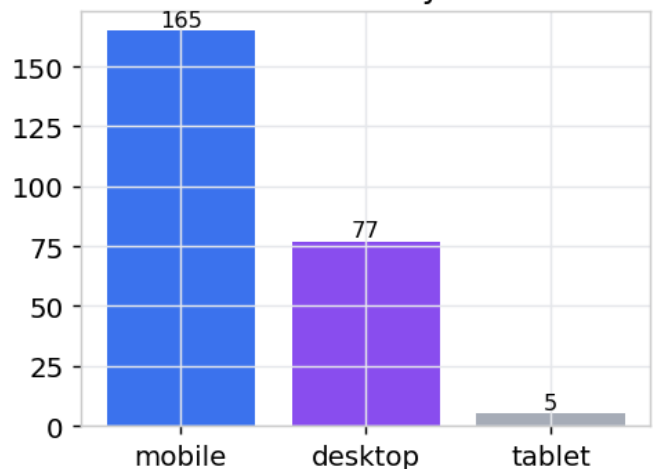

Part 2 — GA4 (14 days)

246 Sessions	209 Users	207 New users	143 Engaged sess.	58.1% Engagement	2m 50s Avg session
------------------------	---------------------	-------------------------	-----------------------------	----------------------------	------------------------------

GA4 sessions by channel

GA4 sessions by device

Key events (conversions)

Event	Count	Key event?	From paid (Cross-network)
phone_click	5	Yes	2
generate_lead	1	Yes	1

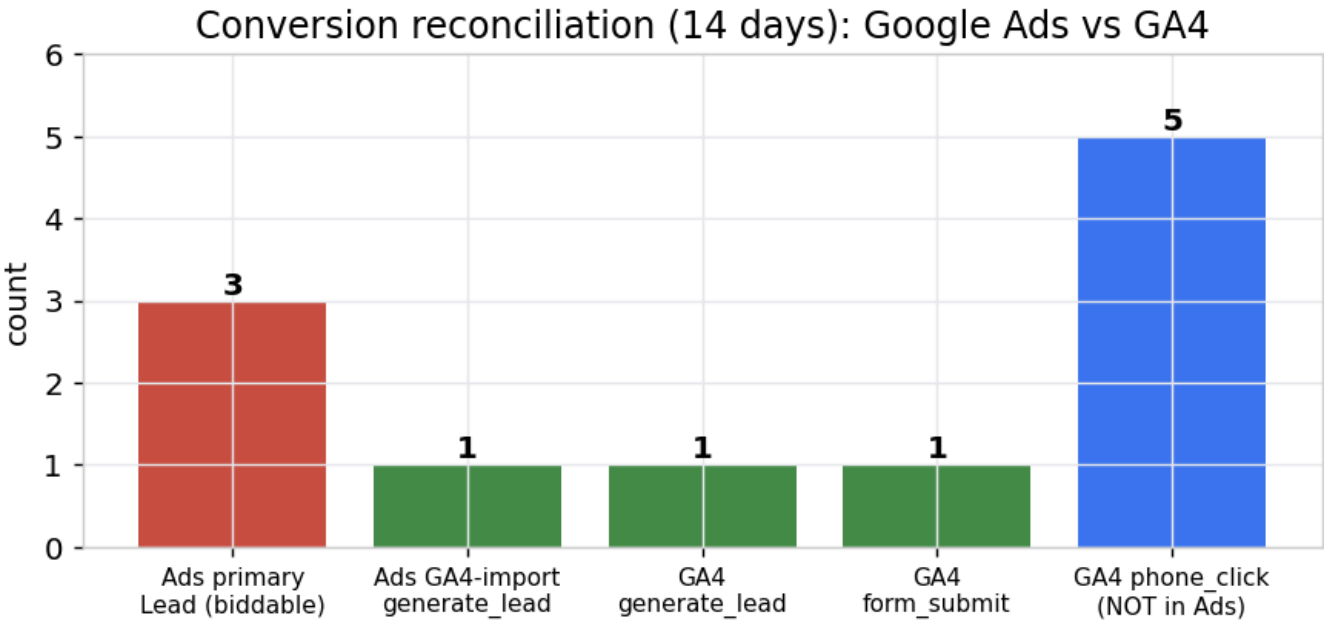

email_click	1	Yes	0
form_submit_success	1	no (diagnostic)	—
form_start	6	no	—

PMax paid traffic appears in GA4 as "Cross-network" (170 sessions), not "Paid Search" (6). Only 1 generate_lead + 2 phone taps came from paid. 6 form_starts but only 1 form_submit_success → most people who begin the quote form do not finish it (a landing-page/form problem).

Top paid landing pages (Cross-network)

Landing page	Sessions	Key events	Engagement
/lp/hybrid-flooring-quote	30	0	70%
/lp/laminate-flooring-quote	28	1	54%
/lp/timber-flooring-quote	25	1	56%
/lp/carpet-flooring-quote	21	0	43%
/contact	18	0	61%
/lp/herringbone-flooring-quote	18	0	67%
/lp/engineered-flooring-quote	17	1	47%

Part 3 — Cross-check: Ads vs GA4 conversions

What matches: the Ads **GA4-import** action "generate_lead" = 1, exactly equal to GA4's 1 **generate_lead** — so the GA4→Ads link is working correctly.

What does NOT match: the Ads **primary** action "Lead — Urbanecofloors" = 3, but GA4 recorded only 1 real form submit (form_submit_success = 1). The extra 2 are most likely **PMax modelled conversions** (Google estimates conversions under Consent Mode + low volume) plus attribution-window/timing differences — **not** 3 separate real enquiries. This should be confirmed in the Ads UI (segment conversions by "modelled").

Missing signal: GA4 recorded 5 **phone-number taps** (2 from the ads) that Google Ads is **not** counting as conversions. So phone leads are invisible to bidding.

Can the tracking be trusted for spend decisions? Partly. The pipe is wired correctly (import matches), but the headline "3" is inflated by modelling, there is **no conversion value** (\$0), and phone leads are uncouned. **Fix these before scaling budget** — right now PMax is optimising on ~1 real observed lead + estimates, which is too thin to trust.

Part 4 — Findings & recommendations (do NOT apply — for Shahab approval)

#	Priority	Finding	Recommended fix (needs GO)
1	HIGH (tracking)	Phone taps (5 in GA4) not counted as Ads conversions	Wire phone_click as an Ads conversion (secondary, like alphaflooringmelbourne) so calls are visible; keep it observe-only until proven

2	HIGH (tracking)	All conversions have \$0 value	Assign a sensible lead value (e.g. avg job value × close rate) so value-based bidding + ROAS become possible
3	HIGH (trust)	Ads "3" vs GA4 "1" real form submit	In the Ads UI, split conversions into observed vs modelled; don't scale budget until the real lead rate is confirmed
4	HIGH (conversion rate)	6 form_starts → only 1 form_submit_success	Landing-page/form fix on the /lp/*-quote pages (shorten form, clearer CTA, mobile) — biggest lever for more leads
5	MED (budget)	PMax under-fed: 3 conv on \$289/14d, IS 18.6%	Either feed it more conversions (fix 1–4 first) or consider a tightly-themed Search campaign for high-intent quote terms; decide with Shahab
6	LOW (hygiene)	Removed "Performance Max-1" shell still present	Optional cleanup; no spend impact

Wasted-spend / negative-keyword audit is **not possible** on Performance Max via the API (no search-term view). If search-term control is wanted, that argues for adding a standard Search campaign.

Part 5 — Phone conversion & Enhanced Conversions (status + recommendations)

These were the audit's top two tracking fixes. Progress (Ads-side only — **no budget, bidding, campaign, PMax or final-URL changes**):

Phone-tap conversion — DONE ✓

The website phone-tap conversion (Analytics phone_click, imported to Ads) was sitting **HIDDEN** — the exact reason the 5 phone taps weren't counted. It's now **ENABLED · Secondary (observe-only)**, so it has **no effect on bidding / Performance Max** . The site's phone_click event is live + verified on prod, so phone taps now register (as a secondary signal) going forward.

Recommendation: keep it Secondary so phone leads are visible without disturbing bidding; promote to Primary only once it proves out.

Enhanced Conversions for leads — 1 click from done

Step	Status
Customer-data terms accepted	DONE ✓ (Shahab, Ads UI)
Site sends hashed email + phone with the lead	LIVE ✓ — contact form sets RAW email/phone_number (E.164) before generate_lead, verified on prod build e6c0862 (gtag hashes in-browser; landing-page form deferred)
Account "Enhanced conversions for leads" toggle ON	PENDING — 1 Shahab UI click (our API is blocked from this account-level setting; currently OFF)
Recording enhanced conversions	Not yet — the hashed data only transmits/records once the account toggle is ON

Recommendation: Shahab turns the "Enhanced conversions for leads" toggle **ON** (Tools → Conversions → Settings, method "Google tag") — the same page where he accepted the terms. Everything else is already live, so the moment he flips it, Enhanced Conversions starts recording and lifts match quality on the lead form. Keep it OFF until then.

Data source note: every number above is pulled live from the Google Ads API (account 1698317815) and the GA4 Data API (property 541260808) for 23 Jun – 06 Jul 2026 (AEST), on 2026-07-07 AEST. Charts are generated from that live data. **Live Google Ads / GA4 UI screenshots are not included** because this worker has API / service-account access only (no interactive UI login) — the figures are API-authoritative and independently reproducible; a UI-login holder can add dashboard screenshots if required.
