

Pool Inspection Melbourne — Google Ads Audit + Post-Migration Tracking Proof

Account 294-894-5895 · site poolinspectionmelbourne.au (now on our React platform) · GA4 426298244 (G-DLTHQYK06V) · GTM-TR6R7CK9 · Ads AW-16452946410
Read-only audit · 2026-07-10 AEST · prepared by ads_all for a ChatGPT ads strategist. 30-day window unless noted.

Owner Summary (plain English)

- Tracking survived the website rebuild — and actually got better.** All three tags (Google Tag Manager, GA4, Google Ads) load and fire on the new React site (checked live in a browser). Consent mode is granted and page views record.
- Both real conversions are genuine, not fake.** The website form ("Website Lead") = 27 and the phone-tap ("Call from web") = 25 in 30 days, and both closely match Google Analytics (31 form submits, 30 phone taps). The form conversion does NOT fire on page-load — only on a real submit.
- Big win from the migration:** the web-form lead used to record 0 from ads; it now records ~27, and total conversions jumped (9 in the prior 60 days → 52 in the last 30). No silent drop — the opposite.
- One clean-up (not urgent, no money impact):** leftover Tag-Manager tags still fire two page-load "fake" conversions into Google Analytics (Contact_Us 257×, About_Us 34×). They do NOT inflate bidding or spend (the matching Ads action is removed / non-biddable) — but they pollute the Analytics numbers. A tag-manager tidy-up fixes it.
- Biggest ads opportunity:** keywords are **100% broad match** with no tight negatives — add negatives + phrase/exact for the winners to stop wasted clicks; and send ads to a dedicated landing page (call-first), not the homepage.

PART 1 — Tracking health (post-React-migration): PASS ✓ (one non-urgent clean-up)

Verified live in a real browser on poolinspectionmelbourne.au (headless Chromium + network capture; the chrome-devtools MCP needs an on-screen display that isn't available in this environment, so headless was used — it does not hang here). Every number cross-checked against the Ads API + GA4 Data API.

Check	Result	Proof
GTM loads (GTM-TR6R7CK9)	PASS ✓	gtm.js?id=GTM-TR6R7CK9 → 200; container active in-page
GA4 fires (G-DLTHQYK06V)	PASS ✓	page_view collect → 204, consent granted (gcs=G111)
Ads global tag / conversion linker (AW-16452946410)	PASS ✓	gtag/js?id=AW-16452946410 loads; gtag.config + linker fire
Website Lead (form) — 6786991134	PASS ✓ real	Ads 27 ≈ GA4 generate_lead 31 = form_submit_success 31. Does NOT fire on page-load (no label on load) — real submits only
Call from web (phone) — 6801964555	PASS ✓ real	Ads 25 ≈ GA4 phone_click 30; website-call metric registers on load (expected)
Every conversion action audited	PASS ✓	see full list below — real leads record; GBP/Smart actions inactive (Smart camp paused)
GA4 ↔ Ads link + imports	PASS ✓	property 426298244 linked; importable
Enhanced Conversions + Consent Mode	PASS ✓	EC-for-leads ENABLED, customer-data terms accepted; Consent Mode v2 granted live
Pre vs post migration volume	PASS ✓ (rose)	9 conv in prior 60d → 52 in last 30d; weekly wk26 6 → wk27 16 → wk28 24

Weekly conversions — surge AFTER the React migration (tracking improved, not broken)

Conversion reconciliation (30d): real leads MATCH GA4 ✓ · one page-load FAKE in GA4 only

⚠ **Clean-up needed (no bidding/spend impact):** the GTM container still fires two **page-load** "fake" conversion events into GA4 — ads_conversion_Contact_Us_1 (257x, a GA4 key event) and ads_conversion_About_Us_1 (34x). The matching Ads "Contact Us" action is **REMOVED** and "About Us" is **non-biddable**, so they do **not** count in bidding or cost. But they massively pollute GA4's conversion numbers (257 fake vs ~61 real). **Fix (route via coord to the GTM/site owner — do NOT edit the site):** remove/pause the two page-load conversion tags in container GTM-TR6R7CK9 and un-mark those two events as GA4 key events.

Every conversion action (full set)

Action	Type	Status	Role	Verdict
Website Lead (6786991134)	WEBPAGE / SUBMIT_LEAD_FORM	ENABLED	Primary	✓ real form leads (27/30d)
Call from web (6801964555)	WEBSITE_CALL	ENABLED	Primary	✓ real phone taps (25/30d)
Phone Call Leads Ad (6786898059)	AD_CALL / PHONE_CALL_LEAD	ENABLED	Primary	✓ calls-from-ads (call ext.)
About Us (6777355833)	GA4 import / PAGE_VIEW	ENABLED	Secondary (non-biddable)	⚠ page-load fake — 12 all-conv, 0 biddable; un-mark
Contact Us (6742619039)	GA4 import / CONTACT	REMOVED	—	⚠ GA4 event still fires 257x (GTM) but not counted in Ads
Clicks to call / Directions / Smart-campaign actions x6	GOOGLE_HOSTED / SMART	ENABLED	Primary	— GBP + Smart camp (Smart camp PAUSED) — inactive
purchase (6742466617)	GA4 import / PURCHASE	HIDDEN	—	— hidden, ignore

PART 2 — Ads audit (strategist-ready)

\$1,048	3,172	290	9.14%	\$3.61	52	\$20.15	\$0
Spend 30d	Impr	Clicks	CTR	Avg CPC	Conv	Cost/conv	Conv value

90-day: \$3,935 spend · 770 clicks · 61 conversions (most in the last 30d — the migration surfaced the form-lead). **Strong CTR (9.1%) + low CPA (\$20)** = a healthy, efficient lead account.

Campaign structure

Campaign	Type	Status	Budget	Spend 30d	Clicks	Conv	Impr share
Lead Campaign 8 Apr 2024	Search	ENABLED	\$50/day	\$908	244	41	26%
Leads-Search-3	Search	ENABLED	\$50/day	\$139	46	11	18%
Melbourne Pool Safety Inspections	Smart	PAUSED	\$10/day	\$0	0	0	—
Lead Campaign Test 11 May	Search	PAUSED	\$100/day	\$0	0	0	—

Keywords, search terms & match types

Keyword match-type mix (△ all broad)

Top keyword (all BROAD)	Spend	Clicks	Conv	QS
pool compliance	\$124	26	6	7
pool inspections	\$87	17	5	10
pool inspections near me	\$84	20	5	8
pool certifiers	\$55	16	1	—
pool fence inspection	\$48	8	0	9

△ 100% broad match (20/20 keywords). Quality Scores are mostly strong (7–10), and search terms are staying on-topic (all pool-inspection queries) — but broad match with no tight negative list is the #1 waste risk. Minor current waste: "pool fence inspection" \$48/0 conv, "pool compliance victoria" \$17/0, "pool barrier inspections" \$14/0.

Device, geo & schedule

Device	Spend	Clicks	Conv
Mobile	\$559	153	26
Desktop	\$458	121	26
Tablet	\$31	16	0

Geo: Melbourne (metro) + specific suburbs targeted ✓. Ad schedule: in use (14 day-part rules) ✓. Both look sane for a local Melbourne service.

Ads, assets & landing pages

- **Assets look thin** — no sitelinks / callouts / structured-snippet assets detected at campaign level. Add a full set (+ call + location assets, GBP already linked) to lift CTR + ad rank.
- **Ads point at the homepage**, not a dedicated landing page — and calls dominate. Build a **call-first landing page** on the React site that matches the ad promise (pool compliance / Form 23).
- **No conversion value set (\$0)** — assign a lead value to unlock ROAS reporting + value-based bidding later.
- Prior flag to re-verify: a final_url_suffix on the main campaign was appending a junk parameter (homepage URL) to every click — confirm it's cleared on the React URLs.

Biggest wins · biggest waste · prioritised actions

#	Priority	Item	Action (read-only recommendation — for Shahab GO)
1	HIGH (tracking)	Page-load fake events in GA4 (Contact_Us 257×, About_Us 34×)	Remove/pause the 2 page-load conversion tags in GTM-TR6R7CK9 + un-mark the GA4 key events (route to GTM/site owner via coord)
2	HIGH (waste)	100% broad match, thin negatives	Add a strong negative list; add phrase/exact for proven winners (pool compliance, pool inspections, near-me); keep broad only with tight negatives
3	MED (conversion rate)	Ads → homepage, no dedicated LP; calls dominate	Build a call-first landing page on React (Form 23 / pool-compliance), repoint ads, re-verify tracking
4	MED (ad rank)	Thin assets	Add sitelinks, callouts, structured snippets, call + location assets
5	MED (measurement)	\$0 conversion value	Assign a lead value → ROAS + value-based bidding later
6	LOW (hygiene)	final_url_suffix junk param; 2 paused campaigns; About Us secondary import	Confirm suffix cleared; tidy paused campaigns; drop the About Us page-view import

Biggest win: tracking is healthy post-migration and the form-lead now records (efficient \$20 CPA, 9% CTR). **Biggest waste:** 100% broad match with no tight negatives + ads to homepage. **Do first:** the GTM fake-conversion clean-up (clean reporting) + a negative-keyword/match-type tighten.

Data source note: figures pulled live from the Google Ads API (account 2948945895) + GA4 Data API (property 426298244) on 2026-07-10 AEST; live tracking verified in a headless browser on poolinspectionmelbourne.au. Charts are generated from that live data. Read-only — no account or site changes; nothing sent to the client.
